SOLUTIONS

About Us

Katmai Solutions is a comprehensive, all-hazards emergency management company focused on providing preparedness, response, recovery, and mitigation consulting services to our clients. We are built on the principle that, when a disaster strikes, communities need to facilitate their own recovery and enhance their future resiliency. Our expert staff provides public and private sector clients with solutions that enhance their preparedness, resilience, and their ability to respond to and recover from incidents of any scope.

Made up of practicing emergency managers from all sectors of government, with a wide array of experience and background allows us to provide services to our clients that are customized to the unique needs of each jurisdiction or organization. We don't utilize a cookie-cutter approach to training or exercise, instead we seek to be part of your internal team and meet the priorities and objectives of each activity.

Custom Training

Our staff can provide training on a variety of emergency management topics. Specializing in training emergency management and EOC personnel, we offer standard FEMA training courses, as well as custom training specific to your organization and based on your specific EOC organizations, policies, procedures, and emergency plans.

Training is delivered in the environment that you select, which can include traditional classroom and in-person training, virtual training, or a hybrid setup.

Exercise Support

Katmai Solutions is your one stop shop for exercise design and support. Providing HSEEP formatted exercises, we will design and execute table-top and functional exercises through full scale and complex events. From initial objective planning, meetings, and inject design, player handouts, to sim cell control and day of exercise conduct, we can provide full support to supplement your in-house staff or as a complete contracted solution.

After Action Reporting

Katmai Solutions provides objective, quality evaluation services for drills and exercises. Our after-action process measures exercises based on the exercise objectives and plans being tested.
